

TOPICS FOR DISCUSSION

1. On which ALSAI's reports you think is necessary to implement open data standards?
2. Based on the reports published online, which do you think are the categories of data that can be included in open data mechanism and at the same time are of interest to the public?
3. Do you think that the findings and recommendations shall be included as metadata and further visualized?
4. Do you think that the organizational measures specified in the reports, shall be made more visible?
5. Do you think that performance audit reports need more indicators, metadata or statistical data? (classification indicators, indexes or statistical processing from the evaluation forms/interviews)
6. Which do you consider to be an optimal solution – include this mechanism in the internal system's database or update this catalog from the CSO, based on the authentic audit reports and interlink it at ALSAI's website?
7. Do you think that the audited institutions could be indexed based on their reaction to implement and fulfill the findings and recommendations? (post-report cases)
